Climate change is never out of the news now, and it won't just fade away like other issues.

The government's "Climate Change Bill" will soon become law, and demands 60% cuts in carbon dioxide emissions by 2050.

All around the country towns and cities are beginning to make cuts in their carbon dioxide emissions, and planning how to prepare for the changes that are coming (more heatwaves, more floods and changes to food production among them).

Manchester City Council has recently published a "principles document" for its climate strategy. That strategy will be released this year, and there will be a prolonged consultation on it.

For more information about what the Manchester City Council is doing on the environment, as well as climate change, go to their website www.manchestergreencity.co.uk
(But please note, this debate is NOT organised by the Council!)

If you go to Manchester Climate Forum's web-page about this debate,

www.manchesterclimateforum.org.uk/april24th.html

you will find links through to all the parties that are participating (and several that aren't) and also supplies further information about the city council's plans.

Look forward to seeing you on the night!
